relief for nearly 30 years.

FACT:

Over 50 Million Americans Suffer
from Allergies

FACT:

The Top Three Indoor Allergy Sources
are Dust Mites, Mold and Pet Dander
and allergies are the sixth leading
cause of chronic disease in the U.S.

Dust Mites

Mold

Pet Dander

FACT:

Millions of Allergy-causing Dust
Mites are in a Single Bed.

The **National Institutes of Health**
recommends encasing the bed as
the primary step to reduce allergen
exposure.

To Treat Allergies, Your Physician
May Recommend a 3-Pronged
Approach

- 1) Using allergen avoidance products to reduce allergen exposure
- 2) Taking allergy medication to reduce symptoms; and/or
- 3) Utilizing immunotherapy to reduce the allergic response and address the underlying condition.

Understanding Allergy Encasings

Your First Step for Allergy Relief

(Visit www.AllergyControl.com/understandingallergy/encasings.aspx for even more information!)

Dust mites can live in any part of the bed, including pillows, mattress, box spring and comforter. As you move while sleeping, allergens from dust mites or pet dander are released into the air. Inhaling them can trigger allergic symptoms. Covering the bed with an encasing blocks these allergens from being released into the air. To understand more about allergy encasings and how they help you, here are some important points:

Q: Why is encasing the bed important for allergy relief?

A: The National Institutes of Health (NIH) outlines "Guidelines for Allergy & Asthma Prevention." These recommendations list encasing pillows and mattress as one of the most important steps for allergen avoidance. To remove allergens from un-encased bedding, the NIH also recommends weekly hot water washing of bedding to kill dust mites. Scientific studies have shown the importance of encasing the box spring, and since dust mites can live in any stuffed bedding, encasing your comforter is another important step.

Q: What protection does an encasing provide?

A: The right allergy encasing creates a protective layer between you and the allergens in your bed. Encasings are either made from tightly woven fabrics or they include a membrane layer — each of which is designed to trap the allergens and keep them away from your body. Certain encasings are also scientifically proven barriers against bed bugs.

Q: How can I be sure that encasing the bed will help my allergy symptoms?

A: Allergy Control® encasings have been tested and proven effective in major independent scientific studies of the various environmental and health benefits associated with encasing the bed. Thousands of allergy patients took part in these studies. Study results found that encasing the bed was associated with a decrease in the number of dust mites and their allergens as well as a decrease in symptoms and the need for allergy medications. For a complete list of studies, visit our Allergy Learning Center at www.AllergyControl.com.

Q: Will an encasing be comfortable to sleep on?

A: Our Allergy Control® encasings are made from the best and most breathable fabrics that feel invisible on the bed and offer total sleeping comfort.

*COTTON PERFORMANCE, and Pristine® COMPLETE prices are for a 9" depth mattress or box spring encasing. For pillow-top mattress depths of 12", 15" and 18", see additional pricing chart below and go online for full selection of sizes. Remember to check mattress depth to ensure proper fit.

	COTTON PERFORMANCE	PRISTINE COMPLETE
12"	Add \$17.00	Add \$17.00
15"	Add \$20.00	Add \$20.00
18"	Add \$23.00	Add \$23.00

Pristine fabrics are patented under U.S. Patent No. 6,277,770. Pristine® is a registered trademark of Precision Fabrics Group Inc.

MEASURING YOUR MATTRESS

Since mattresses and box springs come in different depths, you must carefully measure to ensure proper fit. Using a ruler, measure from the bottom edge of the mattress or box spring to the highest point on the top edge. Make sure to add extra depth for pillow top mattresses.

Comforter Encasings

The final step in encasing your bed is to protect your comforter. People often forget this doctor-recommended step, but to get complete protection from common dust mite and pet allergens, encasing your comforter is a must. Select from our three comforter encasing lines or choose to buy a Pristine® COMPLETE comforter with built-in allergy protection.

Allergy Control® COTTON PERFORMANCE Comforter Encasings

For exceptional protection and comfort, encase your comforter in a COTTON PERFORMANCE Comforter Encasing. The breathable 100% natural combed cotton provides total sleeping comfort while the luxuriously soft 300-thread count cotton creates a lightweight barrier to dust mites, pet dander and bed bugs. With this exceptional cotton encasing on your comforter, you'll enjoy ultimate comfort and top protection for years to come. Machine wash and dry. Lifetime warranty.

Comforters

BedCare Hypoallergenic Fleece Blankets

Get Year-round Comfort. Our NEW BedCare Fleece Blankets – Great For Allergy Sufferers Who Need A Long-Lasting, Attractive Blanket That Can Be Washed And Dried Repeatedly Without Damage

People who suffer with dust mite allergies need attractive blankets that can be washed in very hot water without any harm to the blanket, but they are often not easy to find. Polyester fleece blankets have been improved so much since they were introduced to the market many years ago that you would hardly recognize them now. Although the package directions say to wash in cold water, we have found with our own testing that the BedCare fleece blankets, made with velour-like, tiny, plush fibers, do not shrink, pill or matt, even after repeated hot-water washing and drying. Unlike heavy wool blankets, these light-weight, all-season blankets can stay on your bed year round. 100% Satisfaction Guarantee.

FAST FACT:

“Hypo-allergenic” simply means that the materials used in the product do not cause allergy symptoms.

NEW!

Pillows

NEW! The Pillow That Stops The Growth Of Cold And Flu Germs

Most pillows begin growing mold, bacteria, and dust mites soon after you start using them, and the problem only gets worse over time. That's because we breathe moisture into our pillows as we sleep. But we designed our exclusive Healthy Dreams® Pillow with the Micrenza™ bio-filter to be the first truly germ-free, mold-free, and allergen-free pillow available, so you can sleep safely without breathing in harmful biological particles that cause congestion and infection. No other pillow has a hospital-grade filter to protect you. 10-Year Warranty.

- The outer 300TC cotton fabric of the pillow is bonded to a soft, stretchable, ComforTech™ membrane that keeps moisture from passing into the pillow.
- The cotton shell has been treated with a germ and mold fighting agent to keep anything from growing on the surface.
- All of the air that enters into or out of the pillow must pass through the Micrenza bio-filter to ensure that nothing harmful enters into it.

794-2817	STANDARD	\$49.99
794-2824	QUEEN	\$54.99
794-2831	KING	\$59.99

NEW! Our Exclusive, NEW Allergy Control® Mite-Proof Pillow Protects You While You Sleep And Never Needs An Encasing!

Your protection from dust mites and their allergen is our primary concern, but your comfort and a good night's sleep are important, too. So we created a mite-proof pillow with a special 100% cotton fabric covering that is woven so tightly mites can't penetrate and make a home inside. Because the soft, specially constructed cotton fabric keeps out mites, the pillow never requires encasing yet stays mite-free. Mite-proof pillows that are made with other outer fabrics aren't as cool, comfortable and breathable as ours and often cost more. So, start fresh with the pillow that stays fresh and mite-free, even without an encasing, for as long as you own it. Made in the U.S.A. 5-Year Warranty.

Bedding

Royal Spa Sheets Add A Spa-Quality Layer Of Luxury To Your Bed — **SAVE 40%**

Royal Spa Sheets and Pillowcases allow you to enjoy spa quality bed linens at home. The 100% polyester microfiber fabric is softer than 600 thread count cotton and offers easy care, wrinkle resistant laundering. The ultra fine “peach weave” creates the velvety texture of peach skin. Set includes one fitted sheet, one flat sheet and one pillowcase (for Twin sets) or two pillowcases (for Full, Queen and King sets), and additional pillowcases are available.

- Royal Spa sheets and pillowcases wash and dry easily for simple care.
- Set includes one fitted sheet, one flat sheet and one pillowcase (for Twin sets) or two pillowcases (for Full, Queen and King sets).
- The microfiber fabric is sumptuously soft to the touch and breathes wonderfully well to keep you comfortable all night — or during a quick nap.

Machine wash in cold water. To maintain microfiber’s natural properties, do not use chlorine bleach, fabric softener, or dryer sheets. Tumble dry low. Remove promptly. Do NOT iron.

Add Extra Comfort To Your Mattress

If you’d like to add premium comfort to your mattress, you’ll love our quality-tested, sateen-stripe BedCare Luxury Mattress Pad. The 300-thread count, 100% cotton top fabric is overfilled with more than three times the polyester of a standard mattress pad — a full 10-oz. of fill per square yard. An exclusive Expand-A-Grip® skirt holds the mattress pad firmly in place and fits mattresses up to 15 inches deep. 3-Year Mfr. Warranty.

Waterproof Mattress Pads

Waterproof Mattress Pad comes filled with polyester microfibers for comfort and includes a waterproof layer to protect your mattress from spills or accidents. If stains or wetness in the bed do occur, the pad’s BioShield antimicrobial protection will inhibit the growth of odor-causing bacteria, mold, mildew and fungus. This pad is perfect for wicking away moisture and keeping the bed fresh and odor free. The Smooth-Grip® sidewall skirt won’t ride up and fits mattresses up to 15” deep.

FAST FACT:

Dust mites can live in all stuffed bedding. Any bedding not encased should be washed weekly to remove allergens.

Laundry

Allersearch® Allergen Wash® Allergen Removing Detergent

Allersearch Allergen Wash has always been a customer favorite for its all-in-one ability to clean and remove allergens from dust mites, pet dander, pollen and mold in any wash temperature. You can save on laundry costs with no additional detergent needed and energy bills by washing in cold or warm water. A little goes a long way with the concentrated formula for extra savings while you enjoy relief from allergens. We exclusively offer the convenient 32-oz size for 45 medium wash loads, or choose from the 24-oz size for 30 loads or value-sized 1-gallon bottle for 180 loads. Mild and non-toxic formula contains no fragrances or dyes.

60-2102	ALLERGEN WASH, 24-OZ	\$22.99
60-2107	ALLERGEN WASH, 1-GALLON	\$94.99

De-Mite® Laundry Additive

Eliminate allergens in any wash temperature and keep your favorite detergent with De-Mite Laundry Additive. All you need is 2 tablespoons added with your regular detergent to control dust mites. Save on energy costs, protect washables or colors and prevent shrinking that can occur with hot water. Choose from the 8-oz bottle for 11-12 loads or the economical 1 liter bottle for 45-50 loads.

50-8000	DEMITE, 8-OZ	\$16.99
50-8032	DEMITE, LITER	\$53.99

The Ecology Works Anti-Allergen Laundry Detergent

This hypo-allergenic laundry detergent cleans in any wash temperature (even cold), while removing allergens and odors from dust mites, pets, molds, mildew, smoke and more. The concentrated formula treats 40 laundry loads while rinsing completely to avoid skin irritating build-up that occurs with regular detergents. Odor neutralizer keeps washables smelling fresh. 100% biodegradable and hypo-allergenic formula is free of perfumes, dyes and more.

360-2240	ANTI-ALLERGEN SOLUTION DETERGENT, 40-OZ	\$15.49
----------	---	---------

EnviroRite™ Laundry Detergent Is All-Natural And Environmentally Friendly

EnviroRite Laundry Detergent is a natural vegetable-based detergent made from soy (an organic and natural renewable resource) and other environmentally safe ingredients. The concentrated formula provides highly effective cleaning yet contains no harsh chemicals typical of other detergents. You won't experience any soap build-up as EnviroRite breaks down safely and rapidly to remain gentle on the skin and on the environment. No irritating fragrances or odors, your clothes will have a naturally clean and fresh smell. EnviroRite Detergent is available in an economic, recyclable 1-gallon bottle. Use only 1/8 to 1/2 cup depending on the size of your laundry load.

62-2250	ENVIRORITE DETERGENT, 1-GALLON	\$23.98

Remove allergens in any wash temperature!

Understanding Allergies

If you've been diagnosed with allergies, follow your physician's advice for treatment. These treatments include allergen avoidance steps to decrease allergen exposure, allergy medications to reduce allergy symptoms, and/or allergy immunotherapy measures. If you have indoor allergies, you may be allergic to any of the top three indoor allergens that are caused by dust mites, molds and pet dander. By reducing your exposure to these allergens, you can help to reduce allergy symptoms to improve your quality of life.

Now find these and other helpful articles on our website at:

www.AllergyControl.com/articles.aspx

FAST FACT:

More than 50 million Americans suffer from allergies, the sixth leading cause of chronic disease in the United States.

Understanding Allergen Avoidance

Allergy Control Starts Here

www.AllergyControl.com/understandingallergenavoidance.aspx

Reduce Your Exposure to the Top 3 Indoor Allergens:

Dust Mites

Mold

Pet Dander

Allergy symptoms can be triggered by any number of substances (or allergens), most of which are found in abundance in homes. Dust mite particles, molds and animal dander are the top 3 allergen sources that cause reactions. Learning about allergens and taking steps to reduce your exposure to them can make the difference between having allergy symptoms and breathing easy.

The First Step: Controlling Allergens in the Bedroom

Allergy sufferers can improve their symptoms by taking allergen avoidance steps throughout the home. The Worksheet on our back cover outlines 6 steps for reducing allergens in the home. Although allergen avoidance steps should be taken throughout the entire house, starting these steps in the bedroom is particularly important since the bedroom is where you come into contact with the biggest allergen source – your bed! What should be a clean and restful place may be packed with up to 1 million dust mites that produce allergens to cause your symptoms! You can reduce your exposure to dust mite and pet allergens by covering your bed in allergy encasings. Physicians and the National Institutes of Health (NIH) recommend encasing the bed as a primary step for allergy relief.

Next Steps: Reducing Allergens Throughout Your Home

After the bedroom, use the 6 steps as guidance for prioritizing cleaning throughout your home. Reducing indoor allergens is a cumulative process, and extending cleaning will increase allergy relief. Depending on your particular allergies, you can prioritize steps to focus on those that are most practical and effective for your needs. The steps you take don't have to be an all-or-nothing approach where you remove all allergens. Everything you do helps, and your combined efforts will minimize your exposure, reduce symptoms and potentially decrease the need for allergy medication.

The Basic Facts on Allergies

Allergies can bring about sneezing, congestion, watery eyes, wheezing and other tell-tale symptoms. If you suffer from allergies, you may recognize your symptoms but wonder what causes them and what the best steps are to find relief? Learning about allergies and the source of symptoms (allergens) will help you understand the steps to take to improve your health. To get started, here are some allergy basics:

Allergens

People with allergies react to substances called allergens. Many people can tolerate these substances without difficulty, but your body finds these allergens dangerous, and reacts by producing antibodies against them. Allergy sufferers have an antibody called Immunoglobulin E, or IgE, and these IgE antibodies are specific to particular allergens. When you're exposed to the allergens, the IgE antibody recognizes the allergen and is then involved in the allergic reaction.

Allergic Threshold

People vary in their degree of sensitivity to allergens, their symptoms, and the severity of their allergic reactions. An allergy sufferer who is highly sensitive will react and experience symptoms every time they are exposed to an allergen. People who are slightly sensitive require higher exposure to trigger symptoms. Your allergic threshold determines how sensitive you are to an allergen. If you're very sensitive and it doesn't take much exposure to cause an allergic reaction, you have a low allergic threshold.

Allergen Load

Allergen load is the total exposure at any given time to the various allergens that you are sensitive to.

Allergen Avoidance

Actions taken around the home to reduce exposure to allergens. These steps involve cleaning and containing allergens to minimize your exposure.

Allergy Relief: A Simple Analogy

Picture a glass, which represents your allergic threshold. A small glass (low threshold) overflows easily when too much liquid is added. But, a larger glass (high threshold) can tolerate greater amounts of liquid before it overflows. The liquids filling the glass are allergens and there may be one or several types that cause the overflow. Contact with too many allergens, or ones that you're particularly sensitive to, will cause the glass to overflow. The glass overflowing is your allergic reaction. If you take simple allergen avoidance steps around the home, you can reduce your allergen load, which helps achieve allergy relief and a healthier lifestyle.

Understanding Outdoor Allergens

About Outdoor Allergies

Outdoor allergies (also called "seasonal allergic rhinitis" [SAR], "hay fever," or "nasal" allergies) occur when allergens that are commonly found outdoors are inhaled into the nose and the lungs causing allergic reactions. Examples of commonly inhaled outdoor allergens are tree, grass and weed pollen and mold spores. Other allergens exist outdoors, such as stinging insects and poisonous plants, but these are usually considered "contact," "skin" or "insect" allergens rather than "inhaled" allergens.

In many regions of the United States, a sure sign of Spring, Summer and Fall is the presence of pollen and mold or fungus spores which affects approximately 35 million Americans.

What is Pollen?

Pollen is a very fine powder released by trees, weeds and grasses. It is carried to another plant of the same kind, to fertilize the forerunner of new seeds. This is called pollination. The pollen of some plants is carried from plant to plant by bees and other insects. These plants usually have brightly colored flowers and sweet scents to attract insects. They seldom cause allergic reactions. Other plants rely on the wind to carry pollen from plant to plant. These plants have small, drab flowers and little scent. These are the plants that cause most allergic reactions, or hay fever.

- **Trees pollinate in late winter and spring.** Ash, beech, birch, cedar, cottonwood, boxelder, elm, hickory, maple and oak pollen can trigger allergies.
- **Grasses pollinate in late spring and summer.** Those that cause allergic reactions include Kentucky bluegrass, Timothy, Johnson, Bermuda, redtop, orchard, rye and sweet vernal grasses.

Much pollen is released early in the morning, shortly after dawn. This results in high counts near the source plants. Pollen travels best on warm, dry, breezy days and peaks in urban areas midday. Pollen counts are lowest during chilly, wet periods.

Understanding Dust Mite Allergies

www.AllergyControl.com/understandingdustmiteallergies.aspx

The Basic Facts on Dust Mites

Dust mites are eight-legged arachnids and are relatives to spiders and ticks. Dust mites are microscopic so, unlike bed bugs, they cannot be seen by the naked eye. A female dust mite can lay 25-to-50 eggs every 3 weeks, resulting in dust mite populations of up to 1 million inhabiting a single bed!

Q: Where do dust mites live?

A: Dust mites are found in nearly all homes, even in the cleanest ones. Dust mites thrive in dark, warm and humid environments and are typically found in:

- Pillows
- Comforters
- Carpets
- Mattresses
- Blankets
- Upholstered Furniture

These areas also provide the mite's greatest food source, the shed scales of human skin.

Q: What is the difference between dust and dust mites?

A: Dust is made up of many different particles, a variety of which can cause allergies. The dust mite is much smaller and can leave behind more than 100,000 of its waste particles in a gram of dust, making it a main cause of allergy symptoms.

Q: Am I allergic to the dust mite itself?

A: Allergies are not caused by dust mites themselves, but rather by a combination of their waste particles and dead body fragments. These particles are called dust mite allergens, and most allergic people react to them. Unfortunately, although a dust mite may live for only 2 – 3 months, dust mite allergen particles continue to cause allergy symptoms even after the mite that produced them has died.

Q: What is the difference between dust mites and bed bugs?

A: Both dust mites and bed bugs can find an ideal living environment in your bed. However, dust mites feed off our shed skin cells while bed bugs bite us directly in order to feed off our blood. Dust mites cause inhalant allergy symptoms and bed bugs do not.

Q: What can I do to reduce dust mite allergens?

A: Follow our 6 steps for allergen avoidance, which are particularly helpful for people with dust mite allergies. Remember to specifically:

- Focus on the bed by covering bedding in allergy encasings and washing linens regularly.
- Remove carpet in favor of wood or tile or treat carpet to denature allergens.
- Use a HEPA filtration vacuum that captures allergens.
- Avoid upholstered furniture and curtains where allergens can build up. Choose wipeable furniture like leather and window blinds instead.
- Use air filters to trap airborne allergens.
- Use a dehumidifier and air conditioner to keep humidity low and discourage dust mite growth.
- Clean with a facemask.

Learn more about dust mites. Watch our new video at www.AllergyControl.com.

FAST FACT:

Over 1,000,000 dust mites can live in a single bed, causing allergy symptoms throughout the night.

Need help picking the right encasing?
See our Encasing Comparison Chart on pages 4 - 5!

Understanding Pet Allergies

www.AllergyControl.com/understandingpetallergies.aspx

The Basic Facts on Pet Allergens

Many people allergic to animals think the allergy is caused by the pet hair itself. Actually, it is caused by a protein present in the animal dander, which is made up of flaky skin cells and dried saliva.

Q: Are there hypo-allergenic pets?

A: All pets produce dander, and since dander causes allergy symptoms, no pets are actually hypo-allergenic. Some may produce less dander, and allergy sufferers can be less sensitive to some breeds than others.

Q: Where are pet allergens found?

A: Cat allergen is particularly sticky and is easily carried on clothing. Although pet allergen levels are much higher in the homes of pet owners, these allergens can travel to other areas as dander sticks to clothes and other belongings.

Q: What can I do if I'm allergic to my pet?

A: Although the most effective treatment may require finding a new home for your pet, if you don't make this choice, be sure that your pet is kept out of the bedroom. Wash hands or clothes after coming into contact with the pet, bathe the pet regularly and keep grooming to a minimum.

Q: How should I remove pet dander from my home?

A: Removing pet dander requires thorough cleaning and can take as long as 20 weeks to alleviate symptoms.

- Cover all bedding in allergy encasings with smaller pore sizes to block pet dander.
- Wash linens, blankets and other bedding.
- Remove or treat carpets. Clean with a HEPA filtration vacuum.
- Replace upholstered furniture with wipeable furniture like leather.
- Wipe down walls and hard surfaces.
- Filter air with vent filters and HEPA air purifiers.

Q: What protection does an encasing provide?

A: Pet dander particles are extremely small, and only certain encasings with the smallest pore sizes (under 6 microns) or membrane barriers can trap these particles. An encasing traps pet dander within the bed and protects you from inhaling these allergen particles.

Understanding Mold Allergies

www.AllergyControl.com/understandingmoldallergies.aspx

The Basic Facts on Mold Allergies

Molds are microscopic fungi made up of clusters of filaments that decompose plant and animal matter for nourishment. Many molds reproduce by releasing spores into the air, which settle and grow into new mold clusters. These mold spores contribute to mold allergies.

Q: Where are molds found?

A: Molds live both outdoors and inside the home. Outdoor molds are found in fallen leaves, rotten vegetation, and in other shady, damp areas. Indoor molds can grow in areas that don't have enough ventilation or have water pooling. They thrive in warm, dark or humid areas such as showers or basements.

Q: What can I do to control mold inside?

A: Since mold needs moisture to survive, increasing ventilation to reduce humidity is the best route to preventing mold growth.

- Use dehumidifiers and air conditioners to get humidity to levels between 35-40%.
- Use mildewcide or bleach to kill growth and prevent regrowth.
- Use air vent filters to keep mold spores from circulating through vents.
- Use specialized heat units designed to kill mold spores.
- Use an in-home mold identification kit to determine the location and mold type that is causing the allergic reaction.

Cleaning

Allerserch® ADS™ Anti-Dust Spray

Neutralize allergens from dust mites, pet dander, molds and some pollens with this effective, non-toxic spray. Medically proven tannic acid neutralizes allergens in carpets, drapes and soft furnishings for up to 3 months. 32-oz spray bottle treats approximately 600 sq. ft. The 1-gallon refill bottle is an economical value for larger areas or repeat applications. Not for use on white or light-colored items.

60-2100	ADS, 32-OZ	\$29.99
60-2128	ADS, 1-GALLON	\$93.96

Allerserch® ADMS™ Anti-Allergen Spray

The mild and non-toxic formula of Allerserch ADMS contains no tannic acid or benzyl benzoate, which means this spray can be used on any color carpet, soft furnishings or drapes – even white or light-colored carpets. ADMS requires more frequent application and should be applied every 30 days to keep allergen levels to a minimum. 32-oz spray bottle treats approximately 600 sq. ft. The economical 1-gallon refill bottle is for larger areas or repeat applications.

60-2105	ADMS, 32-OZ	\$19.99
60-2106	ADMS, 1-GALLON	\$42.96

Allerserch® X-Mite Carpet Cleaning Treatment

X-Mite uses tannic acid to neutralize allergens while the sponge-like particles grab dirt and spills to clean your carpet. No water, shampoo or steam is necessary, which can add moisture and increase dust mite populations. Convenient 1-lb pouch treats approximately 150 square feet. Not recommended for cotton, silk or oriental carpets.

60-2101	X-MITE, 1 LB	\$23.99
60-2101K	BUY 3 & SAVE \$12	\$59.97

Treated Dust Cloths

These dust cloths are treated with beeswax to attract and bond dust to make cleaning faster and healthier. Particles bond to the cloth rather than becoming airborne to irritate allergies. Washable, reusable and leaves no residue.

806-6278	SET OF 5, 14" x 18" EACH	\$10.95
----------	--------------------------	---------

NEW! DustMite™ and Flea Control Powder and DustMitex Pre-Mix Spray

DustMite and Flea Control uses natural boron to coat the food source of mites and fleas to starve them out. Just weeks after application, mite populations are lower and almost non-existent 8 weeks later. The 2-lb bag of powder mixes in water for use in a spray bottle for small areas (up to 800 sq. ft.) or in a carpet steamer (400 sq. ft.). The 32-oz spray bottle is conveniently pre-mixed to treat 100 sq. ft. of carpet or upholstered furniture. After initial treatments, both are effective for 6 months.

360-1120	DUST MITE & FLEA, 32-OZ	\$10.49
360-1116	DUST MITE & FLEA, 2-LB BAG	\$31.96

Allerserch® AllerDust™ Dusting Spray

Spray your own dust cloth or duster with AllerDust then wipe surfaces to bind particles. Helps reduce airborne allergens and improve cleaning.

60-2103	ALLERDUST, 2-OZ	\$12.99

FAST FACT:

MERV (Minimum Efficiency Reporting Value) rates an air filter's efficiency, with MERV 12 as the highest rating.

Humidity & Mold

Mold Zapper

Simple, yet effective, Mold Zapper uses convection heat to zap mold spores so that they're unable to multiply and spread to other areas. Air that comes out is free of spores to help reduce the hazards of mold and related mildew growth. It operates silently and is safe to use 24/7, with low energy consumption. It treats 1000 cubic ft. of space and is safe to the touch and around fabrics. 14" in diameter. 1-yr Mfr Wty.

602-6427 MOLD ZAPPER \$79.95

NEW! Soleus Dehumidifiers

Keeping relative humidity around 45% can make a big difference in the dust mite population, the growth of mold, and musty odors in your home. The Soleus Air Dehumidifier can operate in temperatures as low as 41 degrees F without icing up, making them usable in any room - even in your basement - almost year round. Pick the model that is best for you by the rating that refers to how many pints of water can be removed from the air in a 24-hour period. Sturdy casters make it easy to move from room to room. These dehumidifiers automatically shut off when the bucket is full or you can choose the drain hose option for continuous operation. Soleus Dehumidifiers are Energy Star® rated, and that means savings of up to 10% per year over standard dehumidifiers. 1-Year Mfr. Limited Warranty Plus Our 100% Money Back Guarantee.

Air Cleaners

NEW! HEPA+ 3000 & 2000 Air Purifiers

After 15 years of development and improvements, independent tests show that our new HEPA+ portable room air purifiers filter out 99.999% of all particles as small as .3 microns. That's more efficient than most other HEPA-rated purifiers, so you get air that is scrubbed clean of nearly all of the tiny particles that trigger your allergies or asthma. Used in conjunction with the other environmental controls your doctor recommends, you can begin to turn your home or bedroom into an allergen-free zone, and that means you'll feel better every day. The HEPA+ 3000 scrubs all the air in a 20' X 20' room 8 times an hour – giving you far more clean air than most other air purifiers. HEPA+ 2000 delivers super-clean air to a 12' X 12' room with 8 complete air changes per hour. Main HEPA filter lasts up to 5 years. HEPA+ 2000 has a 5-Year Warranty. Choose sand (pictured) or black finish when ordering.

		REG. PRICE	INTRODUCTORY PRICE
712-3000	HEPA+ 3000 — SAND	\$749.99	\$399.99
712-3100	HEPA+ 3000 — BLACK	\$749.99	\$399.99

Nickel Solution™

If you're one of the millions of allergic people whose skin is irritated by the presence of nickel in jewelry, Nickel Solution™ is the answer. If you have a nickel allergy, now you can test your jewelry, watches, and glasses with Nickel Alert™ to see if nickel is present and then coat the pieces that contain nickel, so you can safely wear them. Don't forget to test belt buckles, too! Nickel Guard™ is easy to use and forms an invisible micro-thin bond with the metal to protect you from contact. Nickel Guard will not harm even your most precious pieces. The two-part Kit includes one 7.2-ml bottle each of Nickel Alert and Nickel Guard and 5 cotton swabs for testing.

Allergy Control Starts Here

This set of guidelines, developed in accordance with the National Institutes of Health Asthma Education Prevention Program, will help you reduce allergen exposure in your home. Setting priorities is an effective way to improve your condition.

1 Encase

Scientific studies show the importance of covering pillows, mattresses, box springs and comforters in allergy encasings to avoid inhaling allergens while sleeping. Dust mites thrive in any stuffed bedding so encasings are critical for finding nighttime symptom relief.

2 Wash

Wash linens, blankets and any un-encased bedding weekly in hot water to kill mites and remove allergens. If hot water is not possible, wash with a special allergen-removing laundry product.

3 Clean

Extend and prioritize cleaning throughout the home, using these 6 steps as a guide to minimize indoor allergens. Allergy sufferers should avoid being home when cleaning is done or wear a face mask when doing their own cleaning.

4 Remove

Remove, treat or clean carpet, curtains and upholstered furniture. Hardwood or tile floors, along with wipeable blinds and furniture (such as leather) are preferred. Treat carpet and clean with an allergen-trapping HEPA vacuum.

5 Filter

HEPA filtration products and high efficiency MERV air filters are designed to offer advanced filtration of airborne allergens that pass through these filters to prevent allergens from circulating in the air in your home.

6 Purify

Airborne allergens, especially pet allergens, can be reduced by using an air cleaner. Dust mites and molds thrive in humid environments, so if you live in a humid area, buy a dehumidifier or use air conditioning. Keeping humidity levels between 35 - 40% and air clean reduces allergy symptoms.

Follow Your Physician's Recommendation:

Allergen Avoidance Prescription for Improving Life Indoors

Patient Instructions: Prioritize your allergen avoidance steps and focus on those that are most effective to reduce exposure. The more steps you can take throughout the home, the greater you and your family's overall allergy relief will be.

1. Encase

- Pillow
- Mattress
- Box Spring
- Comforter
